

Air Conditioning For Shops & Retail

Energy Efficient Heating & Cooling

Energy Efficient Climate Control

Ensure optimal comfort for your customers and staff

For over 30 years, Cold Control has partnered with retailers like Adidas, Michael Kors, Graff Diamonds, and Reebok to install and maintain energy-efficient air conditioning systems.

We provide tailored solutions, from wall-mounted units to fully ducted systems, ensuring optimal comfort for customers and staff.

Our expert surveyors offer free site surveys for projects of any size.

- Air Conditioning (cooling)
- Monovalent (single source) heating
- Fresh air treatment through own units or external air handling units
- Air curtains

AC Units For Retail Spaces

Tailored solutions

Our expert team can assess your shop's needs and recommend the perfect system for your retail space.

CEILING MOUNTED CASSETTE

For larger retail spaces, ceiling-mounted 'cassette' units are ideal. They evenly distribute cool air, keeping every corner comfortable. Their sleek design allows flush ceiling installation, preserving the store's aesthetics.

Benefits:

- Even air distribution
- Discreet, space-saving installation
- Ideal for medium to large retail spaces

DUCTED AIR CON UNITS

For an efficient, discreet cooling solution, ducted units are ideal. Concealed ducts distribute air through vents, preserving a clean, stylish space. Perfect for luxury stores, malls, and multi-level shops..

Benefits:

- Hidden design for a seamless look
- Powerful and efficient cooling for large spaces
- Can be zoned for different areas within the store

WALL MOUNTED UNITS

Ideal for small retail spaces, wall-mounted air conditioners are cost-effective, efficient, and easy to install. They provide targeted cooling without using floor space, perfect for boutiques and salons..

Benefits:

- Cost-effective and energy-efficient
- Easy installation and maintenance
- Perfect for small to medium-sized shops

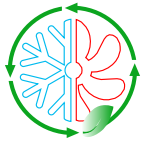

- Ceiling Cassettes
- Ducted Systems
- Wall Mounted Units

Multi-Zone Control

Precisely adjust the climate in different floors and rooms. ● ● ● ●

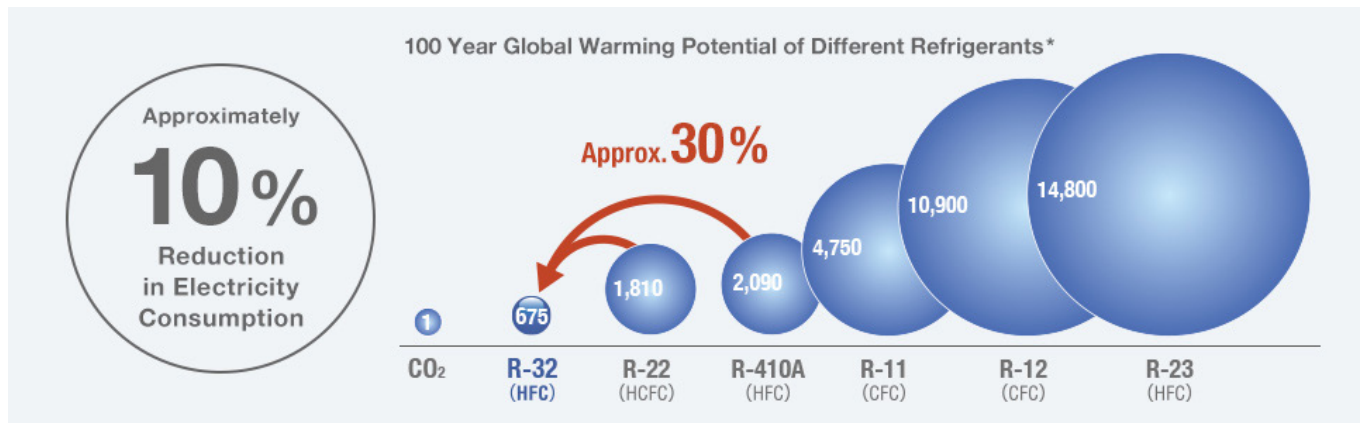

Energy Efficient VRV/F Systems

Highly versatile DX (direct expansion) heat-pump systems

VRV (Variable Refrigerant Volume) and VRF (Variable Refrigerant Flow) systems are known for flexibility and efficiency. The technology adjusts the refrigerant volume in the system based on the precise cooling or heating needs of each zone. Unlike traditional air conditioning systems that have a single, fixed-speed compressor, a VRV/F system utilises multiple compressors that can vary their speed. This allows for simultaneous heating and cooling in different areas.

- R-32 is the most balanced refrigerant in terms of environmental impact, energy efficiency, safety, and cost-effectiveness.
- Because R-32 efficiently conveys heat, it can reduce electricity consumption up to approximately 10% compared to that of air conditioners using refrigerant R-22. Compared to the refrigerants widely used today such as R-22 and R-410A, R-32 has a global warming potential (GWP) that is one-third lower and is remarkable for its low environmental impact.

Approximately
10%
Reduction
in Electricity
Consumption

Environmental Impact of Air Conditioner Refrigerants and Trends

	Ozone Depletion Potential (ODP)	100 Year Global Warming Potential of Different Refrigerants*1
R12 (CFC)	1.0	10,900
R22 (HCFC)	0.055	1,810
R410A (HFC)	0	2,090
R32 (HFC)	0	675

*Source: Values for 100 year global warming potential (GWP) from IPCC Fourth Assessment Report. Comparative 100 year GWP: HFC410A, 2,090; HFC32, 675.

R-32 efficiently conveys heat and can reduce electricity consumption up to approximately 10% compared to that of air conditioners using refrigerant R-22. Compared to the refrigerants R-22 and R-410A, R-32 has a global warming potential (GWP) that is one-third lower and is renowned for its low environmental impact.

Nationwide Maintenance Packages

Priority call outs 24/7

In today's competitive retail environment, creating a comfortable shopping experience is crucial to customer satisfaction and sales. Whether you run a small boutique, a high-street fashion store, or a large department store, the right air conditioning for shops can significantly impact your customers' shopping experience and your staff's productivity. With energy-efficient and reliable retail air conditioning, you ensure a pleasant indoor climate that keeps customers browsing longer and employees working efficiently.

Reduce operational downtime

A well maintained system provides precise ventilation, humidity control, and airflow distribution, along with quiet operation, reliability, and cost efficiency. That's why we provide comprehensive service and maintenance contracts tailored to your needs.

Whether you encounter an unexpected breakdown or require routine servicing, we have a team of skilled engineers located across the UK.

Our round-the clock support services minimises downtime to ensure your customers stay comfortable all year round.

Advanced Solutions

Comprehensive range of air conditioning services for commercial retail spaces, boutiques and stores.

Installation. Service. Maintenance. Emergency Call Outs.

- Site assessments to determine the best air conditioning system for your shop
- Efficient and professional installation with minimal disruption to business operations
- Regular maintenance and servicing to keep your system in peak condition
- Emergency repairs and support to ensure continuous operation
